

Material Handling... **Simplified.**

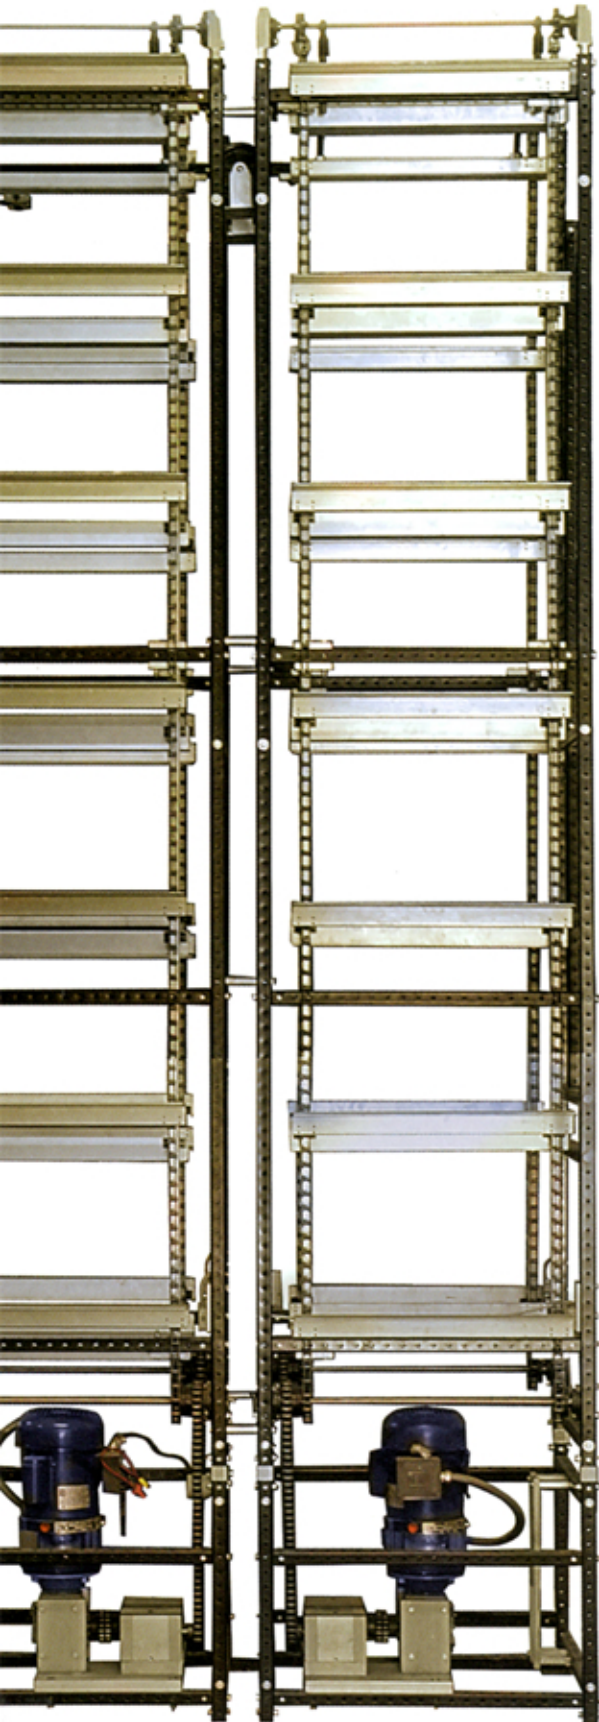

Create your own work stations,
parts flow/handling racks,
carts, conveyors or whatever
you can imagine!

*Offering a Life Time commitment to solving
all of your material handling needs.*

So easy, it's starting an industrial revolution!

Strength, Versatility...

Simplified!

Life Time's tube insert assembly system creates rock solid joinery designed specifically for rigorous industrial applications. It's a snap to assemble virtually any structure using four basic components: tube insert, roll pin, bolt/washer and 1 1/4" square tube. Add to that our continually expanding array of specialty components and you'll discover an exciting structural system with limitless potential.

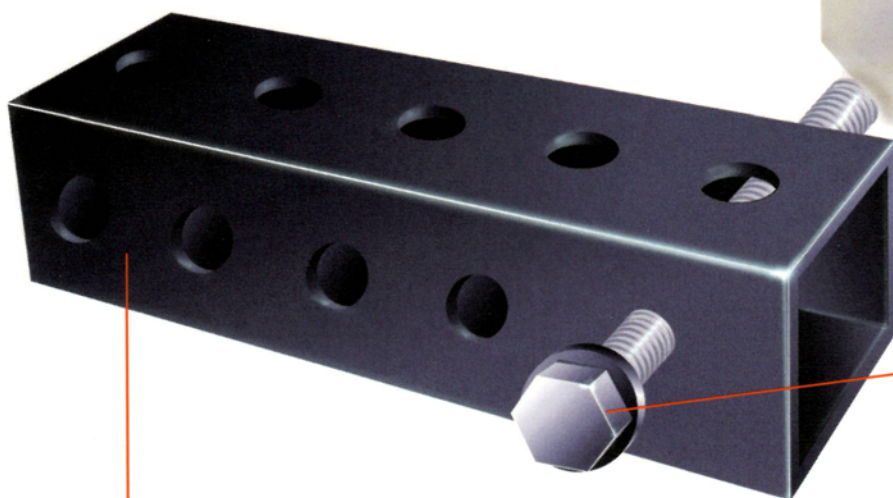

Assembly ease - with less tools, fewer components and pre-punched holes for quick measuring you can build perfectly square systems much quicker than other products available on the market.

Tube Insert - hex aluminum insert allows quick installation and lockability. Dual tapped ends provide additional flexibility.

Steel Roll Pin - easy to install - locks tube insert in place. Removes quickly for design changes.

Industrial Bolt/Washer - securely locks tubing together perfectly square and rigid.

HD Unitized Square Tube - 5/16" holes on 1-1/4" centers, in 10' sections for quick measurement and square structures. Perforated holes allow quick attachment of additional structures or components. Available in aluminum or steel.

All the strength of a welded structure and significant reduction in assembly time = SAVINGS!

Call _____ find out
more about Life Time Systems.

Life Time Systems offering you a world of simplicity:

- **Easy to use** - Only a few components and a tube frame with punched holes makes building any structure simple and fast. No welding, gluing or hard to handle couplers to complicate matters.
- **Strength** - Get the strength and performance you require from a framing system without sacrificing assembly time. Durability to last a Life Time.
- **Versatility** - Two tubing materials (steel and aluminum) and only a few universal components affords you the flexibility to meet all your workstation and material handling needs.
- **Creativity** - Let your imagination run rampant with the ability to attach, add or connect almost anything quickly and easily using the punched holes.
- **Durability** - No plastic parts, everything is steel or aluminum and strong...use over and over again.
- **Assembly Ease** - With less tools, fewer components and punched holes for quick measuring you can build perfectly square systems much quicker than other products available on the market.
- **Cost Savings** - Reduced inventory and quick assembly time are just a part of the overall savings you can achieve. Products can be recycled as your manufacturing requirements change, giving you the opportunity to save even more.
